

ABSTRACT OF THE DISCLOSURE

An imaging portion performs imaging of a subject.

A time lapse imaging condition setting portion sets
a time lapse imaging condition including at least
an exposure time and an imaging interval, prior to
the imaging of the subject by the imaging portion.

5 A determining portion determines a contradiction of
 the time lapse imaging condition set by the time lapse
 imaging condition setting portion according to a
 predetermined criterion. A presenting portion presents
10 at least information relating to the contradiction of
 the time lapse imaging condition based on a determined
 result by the determining portion.
